

# Massachusetts Health Policy Forum: Social Determinant of Health Panel

---

**Jennica Allen, Jessica del Rosario, Lindsay Kephart, Ben Wood**  
**Massachusetts Department of Public Health**  
**Friday, January 11, 2019**

### VISION

Optimal health and well-being for all people in Massachusetts, supported by a strong public health infrastructure and healthcare delivery.

### MISSION

The mission of the Massachusetts Department of Public Health (DPH) is to prevent illness, injury, and premature death; to ensure access to high quality public health and health care services; and to promote wellness and health equity for *all* people in the Commonwealth.

### DATA

We provide relevant, timely access to data for DPH, researchers, press and the general public in an effective manner in order to target disparities and impact outcomes.

### DETERMINANTS

We focus on the social determinants of health - the conditions in which people are born, grow, live, work and age, which contribute to health inequities.

### DISPARITIES

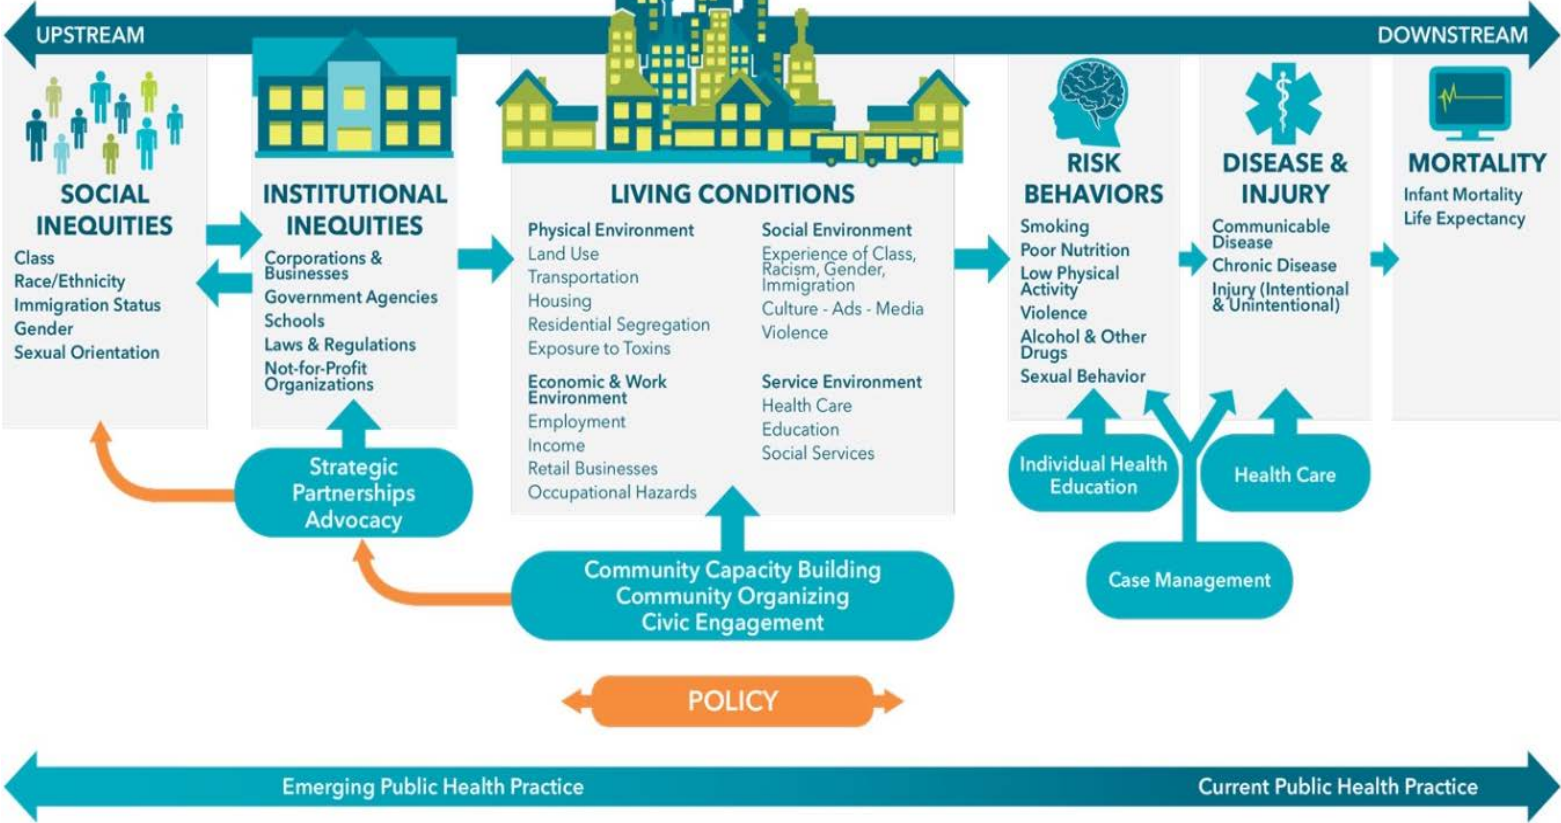

We consistently recognize and strive to eliminate health disparities amongst populations in Massachusetts, wherever they may exist.

EVERYDAY EXCELLENCE

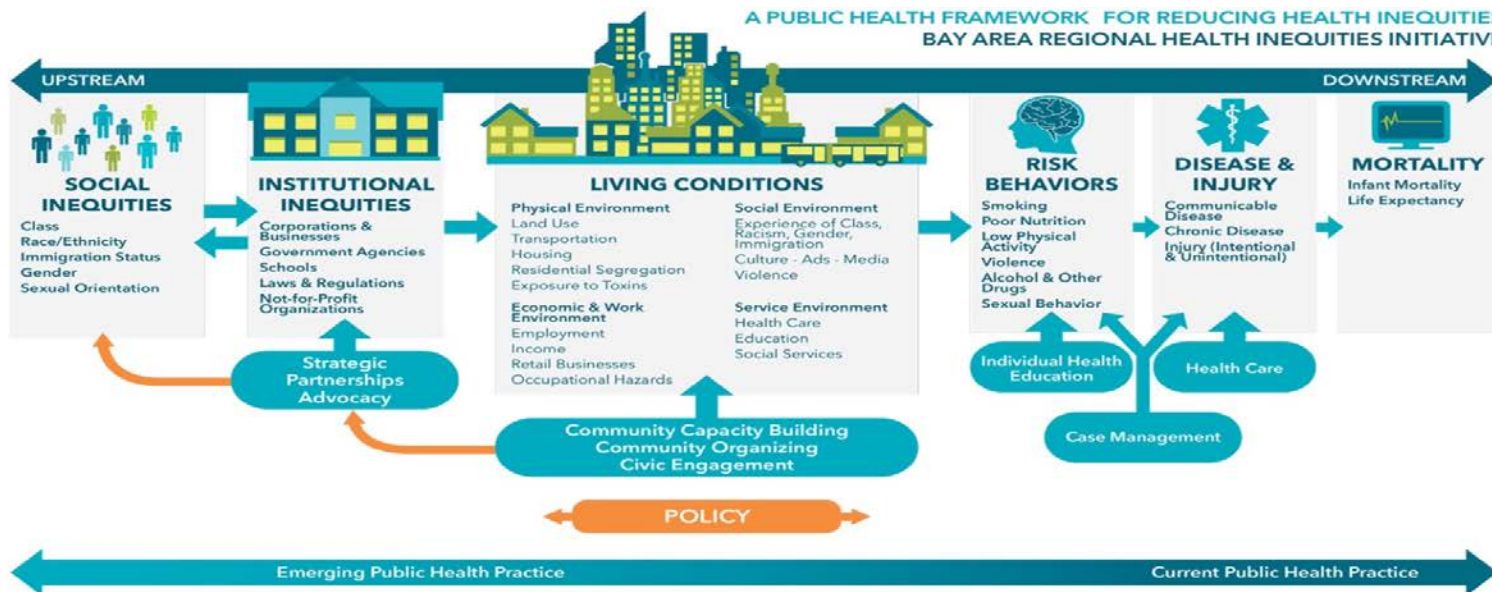

PASSION AND INNOVATION

INCLUSIVENESS AND COLLABORATION

# Innovative State and Local Public Health Strategies to Prevent and Manage Diabetes and Heart Disease and Stroke

- New cooperative agreement with federal funding for statewide chronic disease work
  - CDC money; CDC rules and parameters
- MA implementation; MA innovation to identify and address social determinants

**MA Innovation:**  
 Create geographic composite scores for all communities using health outcome data and social distribution data; In addition to statewide infrastructure, fund health centers serving the populations, and addressing the gaps identified

STROKE HOSPITALIZATIONS

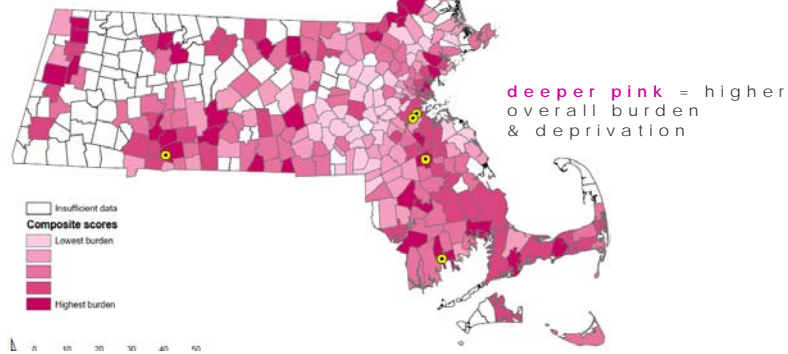

INDEX OF CONCENTRATION AT THE EXTREMES

deeper gray = higher rate; higher concentration of deprivation

THE MA COMPOSITE SCORE

# STATEWIDE DATA INFRASTRUCTURE

- (1) **Rigorously Validated Surveys:** pharmacy survey, community health worker survey.
- (2) **Health Information Technology (HIT):** Azara DRVS, MDPHnet.
- (3) **Surveillance Data:** case mix, all payers claims database.
- (4) **Programmatic Tracking:** total & location of all Diabetes Prevention Programs in the state.

## RACIAL JUSTICE LENS

--BURDEN & INEQUITIES COMPOSITE SCORE--

## COMMUNITIES OF FOCUS

--ASSESSMENTS & EVIDENCE GATHERING--

### BARRIERS & FACILITATORS

- What are the barriers to DPP retention?
- Is existing HIT useful for identifying undiagnosed hypertension?

### PROCESS MEASURES

- Total DPP referrals, enrollments, & completions.
- Total providers with protocol to identify cases of undiagnosed hypertension.

### OUTCOME MEASURES

- Percent with 5-7% weight loss.
- Reduced prevalence of undiagnosed hypertension.

Approach

EFFECTIVENESS

IMPACT

continuous  
program quality  
improvement

## Who Smokes Massachusetts Fact Sheet

Updated 08/19/2016

In 2015, 14% of Massachusetts adults (or 708,015 residents) were current smokers, a historic low.

- 16.4% of men smoke; 11.9% of women smoke.
- 14.6% of whites, 15.8% of blacks, and 11.6% of Hispanics smoke.
- 17.6% of adults, age 45-54 smoke, the highest of any age group (Figure 1).
- 12.3% of adults, ages 18-24 smoke. However, this rate does not reflect use of other tobacco products (eg, little cigars, e-cigarettes, etc.), which may be more prevalent among this age group.<sup>1</sup>

Smoking rates are highest among people with mental illness, low socio-economic status, people with disabilities, and the LGBT population (lesbian, gay, bisexual, and transgender) (Figure 2). All subgroup smoking rates other than LGBT were significantly different from the rate for all MA adults (14%).

## Who Smokes

Massachusetts Factsheet: 2016

Smoking remains the leading cause of preventable death and disease in Massachusetts. Despite an overall decline in adult smoking rates over the past 20 years, some population subgroups continue to smoke at much higher rates than the general population.

### Why do people smoke?

Smoking is often shaped by a broad range of unequal social and environmental factors beyond choice. Social determinants of health such as education, employment, access to health care and quality of care, support from families and peers, the built environment, and societal norms and systems all influence an individual's smoking behavior. However, these determinants do not impact everyone in the same way. Structural racism is a societal system which has historically limited, and continues to limit, the ability of people of color to accumulate resources and power (such as housing and education), and thereby gives white people an advantage over people of color. Structural racism co-occurs with and reinforces other societal systems of disadvantage based on gender, sexual

Both directly and indirectly, structural racism and other systems of discrimination shape the way that social determinants impact health risk behaviors and long-term health.

Inequities in Social Determinants Include:	
<p><b>Education, Income, Employment</b></p> <ul style="list-style-type: none"> <li>❖ Years and quality of education received not only determines knowledge of the health risks of smoking, but also an individual's opportunity to obtain employment, higher income jobs and economic stability.<sup>1</sup></li> <li>❖ Schools in communities of color and low-income communities often receive less funding, thus disadvantaging youth and adults in these communities from having the knowledge and skills needed to improve health behavior.</li> </ul>	<p><b>Access to Health Care</b></p> <ul style="list-style-type: none"> <li>❖ Access to health insurance is often linked to employment, and barriers to achieving health care are often disproportionately experienced by those who smoke at higher rates than other groups (See: Who Quits).</li> <li>❖ Due to unique stressors faced by people of color and disproportionately-affected groups, quitting smoking may be a low priority, and smoking may be used as a coping mechanism.</li> </ul>
<p><b>Social Environment</b></p> <ul style="list-style-type: none"> <li>❖ Risk factors that contribute to the uptake and continuation of smoking, such as stress and stigma, disproportionately affect those experiencing poverty and people of color experiencing discrimination.</li> <li>❖ Social environment, such as peer and family use of tobacco can influence smoking behavior among youth and adults.</li> </ul>	<p><b>Built Environment and Housing</b></p> <ul style="list-style-type: none"> <li>❖ Where one lives determines their ability to access tobacco and their exposure to tobacco-related marketing, especially in the point of sale environment.</li> <li>❖ Extensive research has shown that the density of tobacco retailers in neighborhoods surrounding schools has been associated with higher youth smoking rates.<sup>2</sup> Greater retail density can support the normalization of tobacco use and increase environmental cues to smoke through constant exposure to tobacco products and advertising.<sup>2</sup></li> </ul>

# Mass in Motion

How the Mass in Motion Municipal Wellness & Leadership Initiative moved further upstream

## HEALTHY COMMUNITY CHANGE FRAMEWORK

This is where Mass in Motion works!

## INCORPORATING RACIAL EQUITY

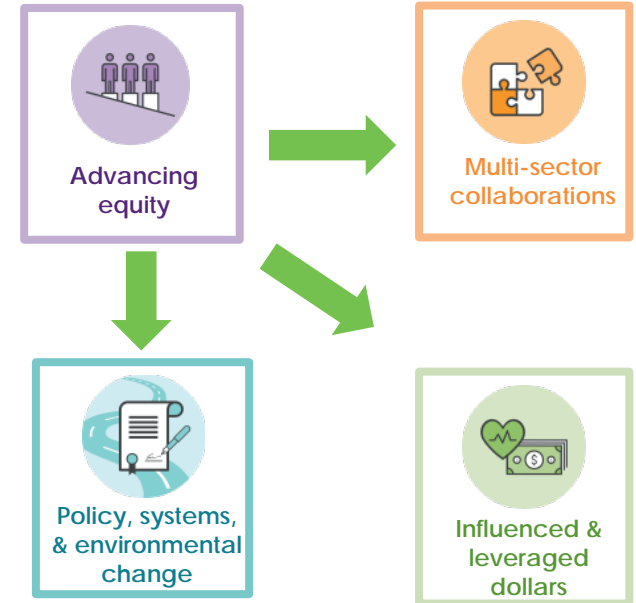

### Leading with Race Framework

- Disaggregate data
- Engage priority populations
- Understand root cause inequities

### Racial Justice Reframing

Who benefits?  
 Who is harmed?  
 Who influences?  
 Who decides?

## SUSTAINABLE SOLUTIONS APPROACH
